EDUCATION AND TRAINING

04/2022 – 03/2026

MSc. Computer Science Rheinland-Pfälzische Technische Universität Kaiserslautern, Germany

PROJECTS

11/2024 – 05/2025

Master Thesis - Multi-View Face and Gesture Animation With Dynamic Gaussians

- Designed and developed a **multi-view MoCap** system for capturing facial expressions and hand gestures, enabling realistic upper-body **Gaussian Avatars**
- Developed a data preprocessing pipeline to process the captured **dataset**, ensuring readiness for the **Gaussian Avatar** creation
- The pipeline included **camera calibration**, **keypoint detection**, **body segmentation**, **background matting**, and **SMPLX-based body model fitting**
- Curated a diverse dataset of multiple users performing various facial expressions and hand gestures that can be used for different applications
- Developed an avatar model based on **3D Gaussian splatting** to support upper-body motion synthesis, ensuring realistic replication of facial expressions and hand gestures

WORK EXPERIENCE

Software developer at Evologics GmbH | Berlin, Germany

04/2026 – Current

- Designing and developing backend services for an API server in **Golang** along with **PostgreSQL Database** for a cloud based web application.
- Designing and developing an Kubernetes based **DevOps** pipeline as part of **CI/CD**.

Research Assistant at Technologie-Initiative Smartfactory KL | Kaiserslautern, Germany

06/2023 – 03/2026

- Configuring and deploying the open-source **OpenShift** solution on in-house servers to optimise **Kubernetes** and **Docker orchestration**
- Integrating **Eclipse BaSyx** in **Java** to host **Asset Administration Shells (AASX)**
- Designing and implementing **Tekton Pipelines** within OpenShift to establish a robust **CI/CD** framework

Research Assistant at Deutsches Forschungszentrum für Künstliche Intelligenz GmbH | Kaiserslautern, Germany

05/2023 – 12/2023

- Processed Floating Car Data with **Python** using **Pandas**, **NumPy**, and **Elasticsearch** for Smart City analytics
- Performed data preprocessing in Python for noise reduction, missing value handling, and outlier removal, enabling reliable trip-level analysis
- Built interactive dashboards with **Plotly** in **Python**, allowing city planners to identify peak congestion and enabling data-driven decisions around urban mobility and infrastructure planning

ADDITIONAL INFORMATION

Technical Skills

- **AI and Machine Learning** - Deep Learning, PyTorch, TensorFlow, OpenCV, 3D Gaussian Splatting, NeRF
- **Data Analysis and Visualisation** - Pandas, NumPy, Matplotlib, Plotly, Elasticsearch, OpenSearch, Open Telemetry

Kaiserslautern, Germany
